**SCAN ME**

For information on the specific selection and validation of MSVA antibodies  
see page 1-9.

Our product overview and the individual antibodies can be found on page  
10-31.

A distributor list is located on the last page.

All MSVA antibodies are validated on 76  
different normal human tissues  
by IHC

## MS Validated Antibodies

Large-scale tissue-validated antibodies specifically designed  
for immunohistochemistry on formalin-fixed tissue

Analyzing all human normal tissue types allows the testing of all human proteins  
and their post-translational modifications for cross-reactivity

Highly selective validation pipeline: Only 175 of 7,000 antibodies have passed  
testing so far and were selected for the MSVA portfolio

Unique antibody documentation on the MSVA website with 60-100 images of  
relevant normal tissues and selected tumors

Documented performance characteristics of many antibodies in studies  
involving more than 10,000 tumors

# Antibody Validation Approach

Antibodies intended for use on formalin-fixed tissue must be specifically validated on formalin-fixed tissue. According to the International Working Group for Antibody Validation (IWGAV), there are only two ways to document the specificity of antibodies for immunohistochemistry on this type of tissue. These are:

## 1. Orthogonal strategy

This means the comparison with a second independent method for measuring expression across a large number of different tissue types.

## 2. Independent antibody strategy

This means a comparison with one or more independent antibodies for the same target protein. Specific staining is achieved with both antibodies, while staining found with just one antibody must be considered non-specific or cross-reactive.

To ensure the best possible validation and to avoid the problem of non-specific antibodies, MS Validated Antibodies combines both approaches. The resulting abundance of information on the antibodies is available on our website.

## Step 1: Look up RNA data

First, we look up the RNA data from the *Human Protein Atlas*. It shows in which tissues staining is to be expected. For example, a PLAP antibody is expected to stain almost exclusively in the female genital tract (placenta). We only look at the RNA data because it is objectively measurable while the protein expression measurement can be falsified by the suboptimal selection of an antibody.

## Step 2: Comparison of Antibodies

In the second step, we compare our MSVA product candidates with (at least) one other independent and established clone on the market to confirm the placenta staining as specific. In the images below, additional stainings outside of the placenta are both "antibody-specific" and represent cross-reactivities. We test product candidates until we find a suitable candidate. If not, we will not approve the antibody.

## Final PLAP clone MSVA-350R

**Approved!**

We identified a clone that shows no cross-reactivity

**Our PLAP clone MSVA-350R  
only stains placenta on a  
TMA test.**

# Product Highlights

# Normal and Cancer Tissue Galleries

Gallery of normal tissue and cancer tissue with more than 60 images on our website for each antibody. Here an extract of our Trop-2 (MSVA-733R) normal tissue gallery.

# MSVA Large-Scale Studies

It is often not known to researchers and pathologists where certain antibodies should stain and literature data on certain proteins show inconsistent results. In order to get a true picture of the staining behavior of an antibody MSVA supports IHC large-scale studies on thousands of different tumor samples.

Arginase-1 clone MSVA-511R  
**14,912 samples**

MTAP clone MSVA-741R  
**13,067 samples**

Cytokeratin 5 MSVA-605M &  
Cytokeratin 6 MSVA-606R  
**15,000 samples**

CTLA-4 clone MSVA-152R  
**4,582 samples**

TTF-1 clone MSVA-312R  
**15,564 samples**

INSM1 clone MSVA-456R  
**14,908 samples**

PAX8 clone MSVA-708R  
**15,223 samples**

PD-L1 clone MSVA-711R  
**14,000 samples**

PSAP antibody clone MSVA-452M  
**31,358 samples**

TACSTD2 / Trop-2 clone MSVA-733  
**18,563 samples**

EpCam /Pan CK / Trop-2  
**14,832 samples**

CEA clone MSVA-465R  
**15,413 samples**

CPA1 clone MSVA-601M  
**12,274 samples**

Cytokeratin 7 clone MSVA-607R &  
Cytokeratin 20 clone MSVA-620R  
**15,424 samples**

TRPS1 clone 512R  
**16,818 samples**

GATA3 clone MSVA-450M  
**16,557 samples**

Mesothelin clone MSVA-235M  
**12,679 samples**

p16 clone MSVA-016R  
**15,783 samples**

PLAP clone MSVA-350R  
**12,381 samples**

Progesterone Receptor clone MSVA-570R  
**16,445 samples**

P63 MSVA-063R  
**10,200 samples**

Uroplakin 1B clone MSVA-734M  
**14,061 samples**

# Multiplex Fluorescence Immunohistochemistry

The future of immunohistochemistry

Multiplex fluorescence immunohistochemistry (mFIHC) allows multiple antibodies to be applied to a tissue slide. Currently available devices allow the simultaneous analysis of 4 (Versa 8, Leica), 6 (Vectra Polaris, AKOYA) up to more than 50 antibodies (CODEX, AKOYA). Sophisticated analysis frameworks use artificial intelligence to identify specific cell types defined by a combination of positive and negative antibody staining and the spatial relationship between those cell types.

Due to the high number of different “colors” on each stained slide and the impaired differentiation of morphological cell types in fluorescence imaging, visual quality control of individual antibodies becomes impossible. Non-specific or cross-reactive antibody staining of one or more antibodies used in a multicolor panel can seriously distort the data and conclusions from the experiments.

Hence the quality of the composite of antibodies used  
in a mFIHC panel is crucial.

Also available BSA & azide free

# MSVA Website

## a useful guide for our antibody users

MS Validated Antibodies is dedicated to provide users with unique product documentation that allows them to better understand their antibodies, which is key to a successful use of an antibody in IHC. We provide up to 100 images of each antibody in a normal tissue gallery and cancer tissue gallery.

Images of normal tissue gallery of CD7 MSVA-007R

Images of cancer tissue gallery of CD7 MSVA-007R

We provide our own validation data as well as links to other relevant sources such as the Human Protein Atlas, the TCGA database or published studies. Most of the information is underlined with images, graphics and tables. Here is an example of a summary of a study using our PLAP antibody.

Data from the publication: ["Pattern of placental alkaline phosphatase \(PLAP\) expression in human tumors: a tissue microarray study on 12,381 tumors"](#). Published by Reiswich et al. in the Journal of Pathology: Clinical Research, August 7th, 2021.  
Summarized in own graphics:

PLAP staining in tumors "ranking order" by positivity with antibody **MSVA-350R**.

# Protocol Recommendations

We offer protocol recommendations for manual protocols and Autostainers from Dako, Leica and Ventana.

## Agilent / Dako – Autostainer Link 48

Pretreatment in PT-Link for 30 minutes at 95°C (pH high); FLEX peroxidase blocking for 5 minutes (room temperature), MSVA-350R 1:150 for 20 minutes (room temperature), FLEX+ mouse/rabbit (LINKER) for 15 minutes (room temperature), horseradish peroxidase (HRP) for 20 minutes (room temperature), FLEX DAB+Sub-Chromo for 10 minutes (room temperature), FLEX hematoxylin for 5 minutes (room temperature).

Dako – Placenta

Dako – Kidney

Dako – Esophagus Adenocarcinoma

## Leica – BOND RX

Dewax at 72°C for 30 seconds; Pretreatment in Bond Epitope Retrieval Solution (ER2 – EDTA pH9) for 20 minutes at 100°C; Peroxidase blocking for 5 minutes (room temperature), MSVA-350R 1:150 for 15 minutes (room temperature), Post primary (rabbit anti mouse) for 8 minutes (room temperature), Polymer (goat anti rabbit) for 8 minutes (room temperature), mixed DAB refine for 10 minutes (room temperature), hematoxylin for 5 minutes (room temperature).

Leica – Placenta

Leica – Kidney

Leica – Esophagus Adenocarcinoma

## Roche – Ventana Discovery ULTRA

Pretreatment for 64 minutes at 100°C (pH 8,4); CM peroxidase blocking for 12 minutes (room temperature), MSVA-350R **1:150** for 20 minutes at 36°C, secondary antibody (anti-rabbit HQ) for 12 minutes at 36°C, anti-HQ HRP for 12 minutes at room temperature, DAB at room temperature, hematoxylin II at room temperature for 8 minutes, bluing reagent at room temperature for 4 minutes.

Ventana – Placenta

Ventana – Kidney

Ventana – Esophagus Adenocarcinoma
